

# THANTAM TUMNAT

Email : ca.tumnat@gmail.com | Tel. : 0981920761

Fullstack developer  
https://github.com/thantam-tumnat

## SUMMARY

Full-stack developer with hands-on experience building RESTful APIs using Go and Fiber. Experienced in full-stack development with React, PostgreSQL, Docker, and microservices architecture through internship and personal projects.

## EXPERIENCE

Loxbit

System engineer (Programmer department)

AUGUST 2025 - NOVEMBER 2025

BANGKOK, THAILAND

- Implemented **HTML/CSS** for ATM user interfaces based on figma mockups provided by the UX/UI team.
- Developed and implemented new features for internal web applications, collaborating with team members to improve functionality and user experience.

3TSKY

System engineer (Intern)

OCTOBER 2024 - MARCH 2025

BANGKOK, THAILAND

- Collaborated with internal teams, customers, and international vendors in English to support cybersecurity solution deployment and project coordination.
- Developed practical knowledge of cybersecurity
- Supported deployment and configuration of SIEM, Automated Pentest, and WAF solutions.

Database System Class, KKU

Teaching assistant

JUNE 2024 - SEPTEMBER 2024

KHONKAEN, THAILAND

- Supported course instruction in **relational database** concepts, **SQL**, **NoSQL**, Database designing
- Evaluated and graded student assignments and submitted results to instructor

TCC Technology

Backend developer (Intern)

MARCH 2023 - JUNE 2023

KHONKAEN, THAILAND

- Designed and implemented RESTful API using **Golang (Fiber)**.
- Collaborated in feature planning, **RESTful API** sequence designing, and database designing.
- Worked in a Scrum Agile environment with GitLab, and **Microservice** and **Clean architecture**.

## SIDE PROJECTS

ChatHub — Real-time Messaging App

Go, React, GraphQL, WebSocket, Docker | [GitHub](#)

- Built a real-time chat app exposing one set of Clean Architecture usecases through three delivery layers — **REST**, **GraphQL**, and **WebSocket** — keeping business logic free of duplication.
- Used WebSocket to push new messages to everyone in a room instantly instead of polling, and GraphQL to fetch a message together with its sender in a single request; React + TypeScript + Vite frontend.

Myblogs — Microservices Blog Platform

Go, React, PostgreSQL, Kafka, Redis, Docker, Kubernetes | [GitHub](#)

- Built a blog platform with Go **microservices** following Clean Architecture, separating user and blog into independent services that communicate through **Kafka**, with **Redis** to speed up
- Containerized with **Docker** and deployed via **Kubernetes**; built a React + **Vite** frontend

WordYQuiz — Vocabulary quiz game

Go, React, PostgreSQL, Docker | [Live](#) | [GitHub](#)

- Built a quiz web app with a Go (Fiber) REST API structured in clean architecture over a PostgreSQL
- Containerized the stack with Docker and deployed across PaaS (**Vercel**, **Render**, **Supabase Postgres**)

## SKILLS

|                                                                                                                                              |                                                                                                                                                                              |                                                                                                                                                                                                |
